

## Purpose

---

Instructions for CXS to add their S drive EBCX files into Meridian Active Projects.

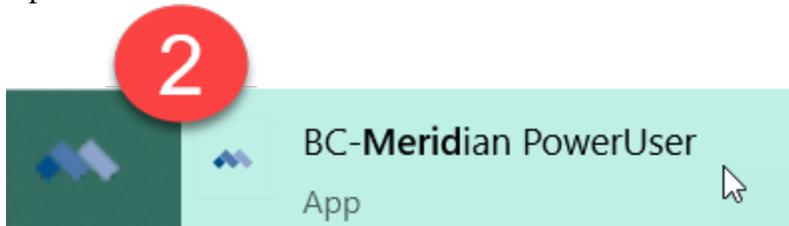

## Procedure

---

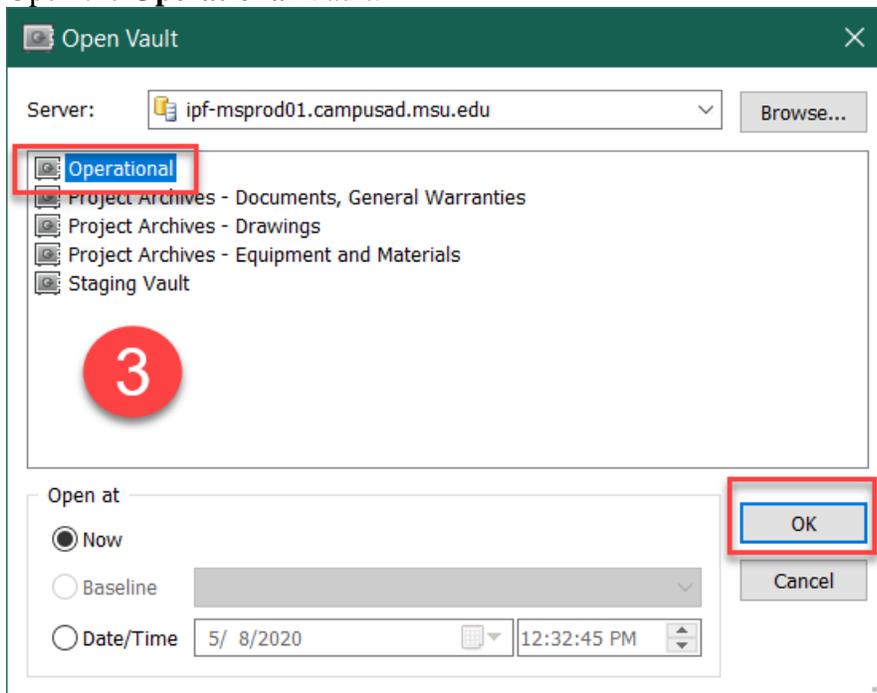

1. Create a zip file that contains the CXS files you want to add to Meridian.
  - a. One zip file per building would be fine unless the zip files get too big, then they need to be split up in a thoughtful manner. 4GB is the biggest file size accepted by Meridian.
  - b. Name the file with the name of the building.

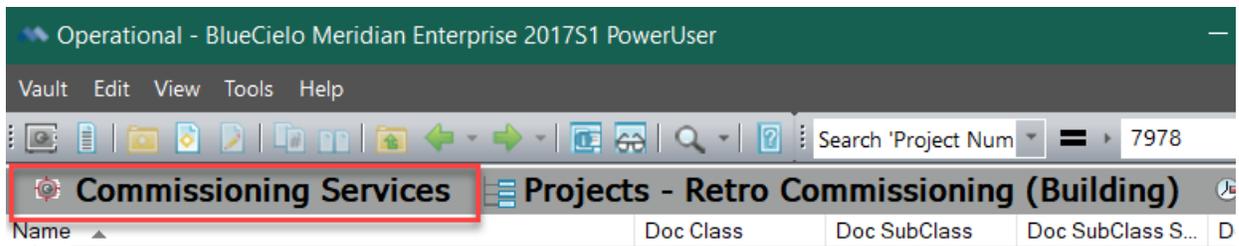

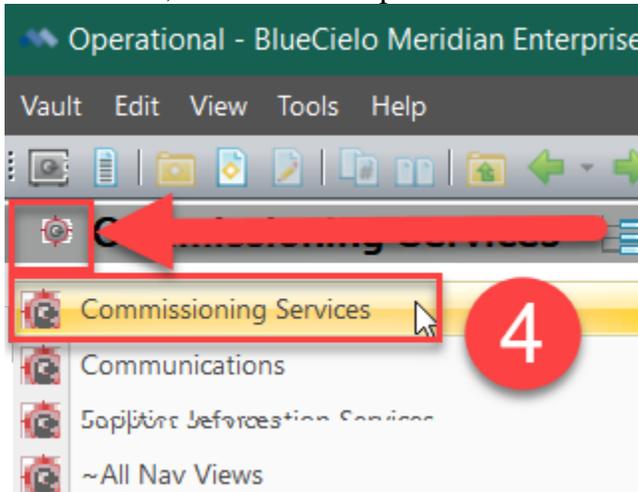

2. Open **Meridian**.

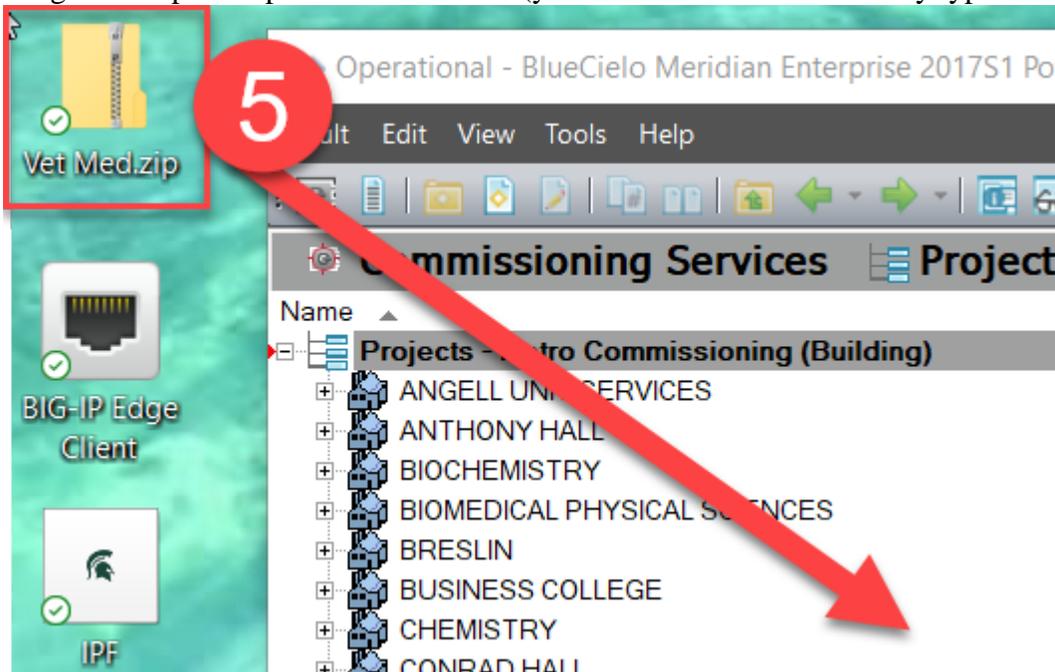

3. Open the **Operational** Vault.

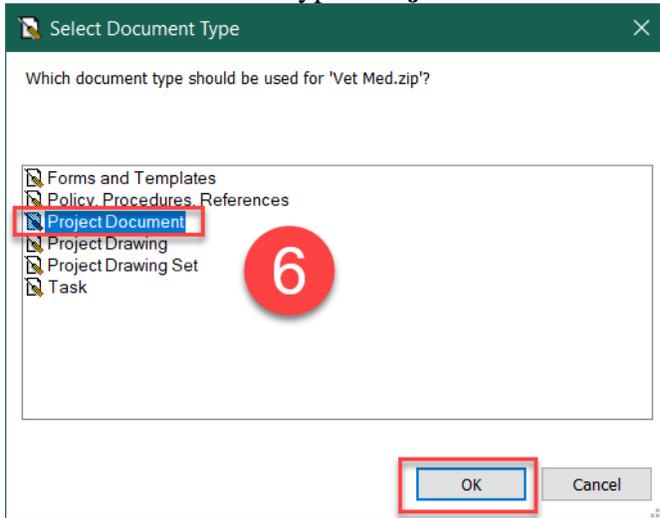

4. If it is your first time opening the Operational Vault, select the **Commissioning Services** Scope.
  - a. If you aren't in the commissioning services scope, but have already been in the Operational Vault before, click on the scope icon and select Commissioning Services.

5. Drag and drop the zip file into Meridian (you do not have to conduct any type of search first).

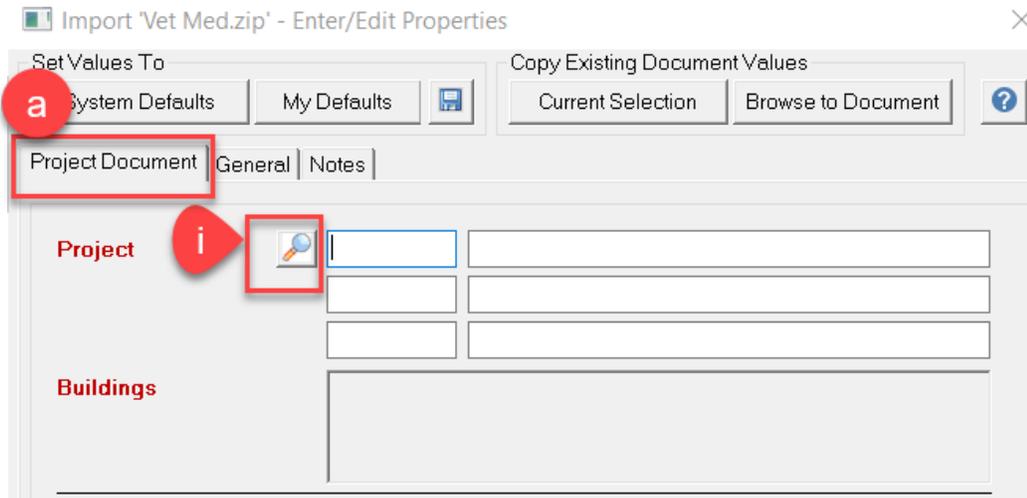

6. Select the Document Type: **Project Document**

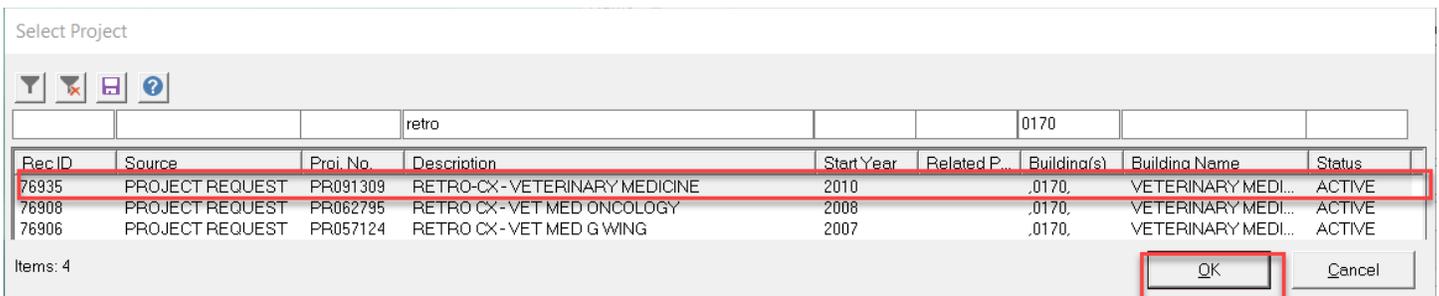

7. Describe the file. **Red fields** are required. (after doing this once, see helpful hints below for a faster way)

a. **Project Document Tab**

i. Click on the **magnifying glass** and select the project from the project administration tool.

- Use the **filter fields** to find the project.
- **Double click on the project or select it and click OK.** If you don't do this, you will have to repeat the step.

b. **General Tab**

i. Fill in the **Sub Class**: Commissioning

Import "Vet Med.zip" - Enter/Edit Properties

Set Values To: System Defaults, My Defaults, Copy Existing Document Values: Current Selection, Browse to Document

Project: [ ] | **General** | Notes

**i** **Sub Class** [CXS] COMMISSIONING

CSI SubDivision [ ] [ ]

**Security Level** [PB] PUBLIC

1. **Description** is optional and will become part of the Meridian generated file name if filled in.

**ii** Description: veterinary medical building

File Suffix: VETERINARY MEDICAL BUILDING

**Originator**: INTERNAL

Source Company: IPF, INFRASTRUCTURE PLANNING AND FACILITIES

Orig. File Name: Vet Med

**MSU File Name**: PR091309\_CXS\_VETERINARY MEDICAL BUILDING

Document Date: 5 / 8 / 2020

2. Pick an **Originator**:

1. **Internal** if you'd like to use the file name autogenerated by Meridian.

File Suffix: [ ]

**1** **Originator**: INTERNAL

Source Company: [ ] [ ]

Orig. File Name: Vet Med

MSU File Name: PR091309\_CXS

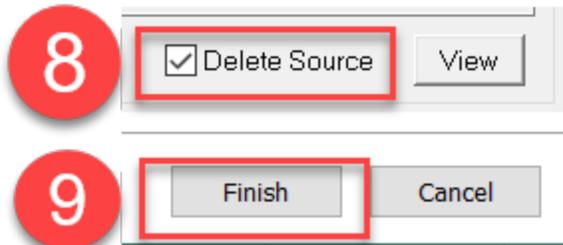

Document Date: 5 / 8 / 2020

File Name: PR091309\_CXS

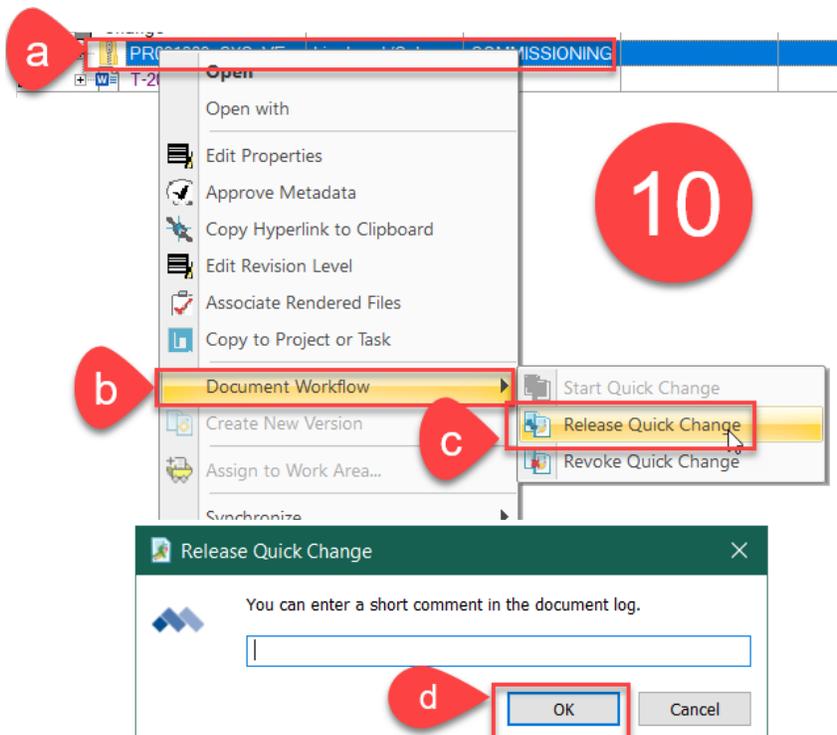

2. **External** if you want Meridian to use the original file name. If you select this option, you will have to pick a source company (IPF).

8. Check the box for **Delete Source**. This will delete the file from the network drive.
9. Click **Finish**.

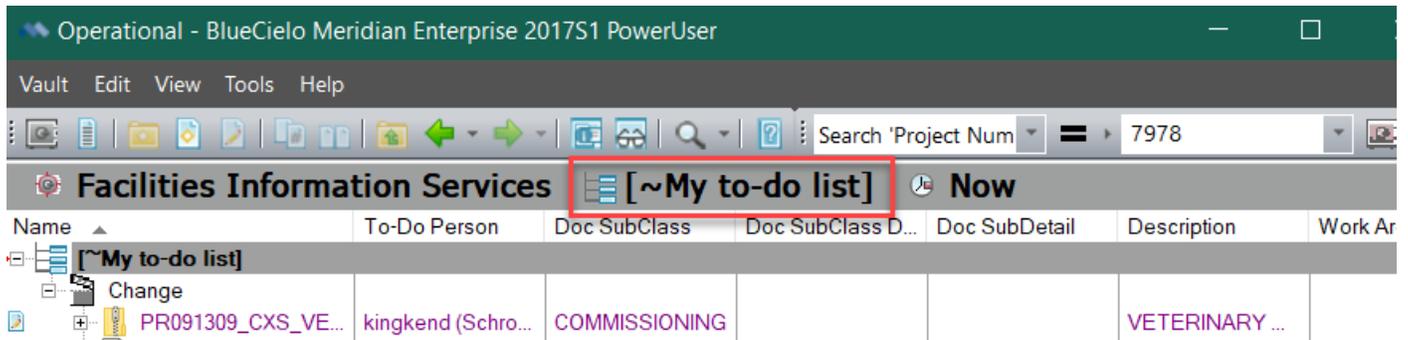

10. Release the Document into Meridian.
  - a. **Right-click** on the file
  - b. Select **Document Workflow**
  - c. Select **Release**
  - d. Hit **OK**

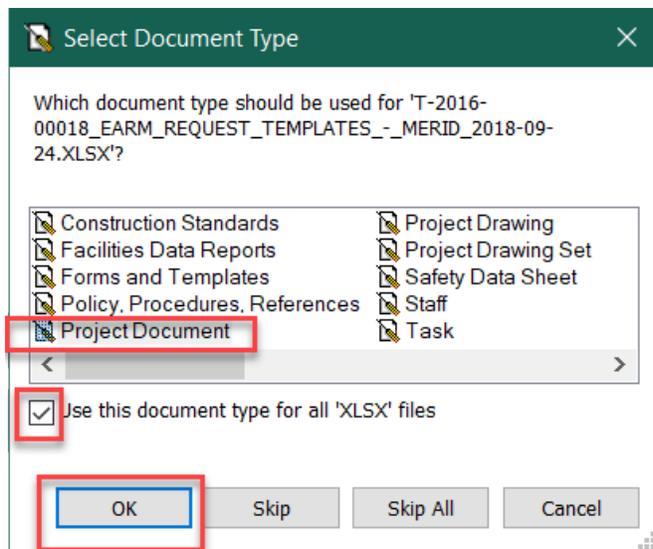

## Helpful Hints:

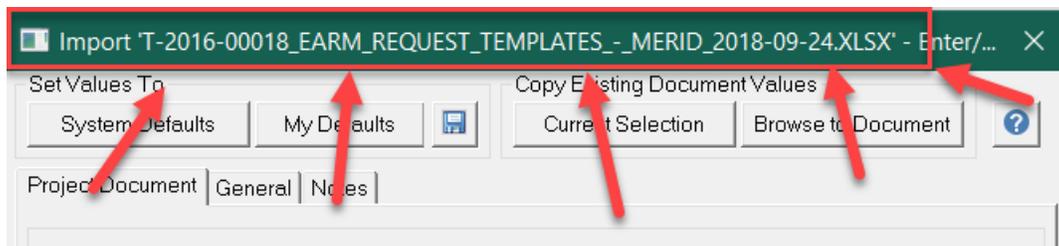

- To view all the files you have under a quick change that needs to be released, you can select the NAV View named [**~My to-do list**].

- To Add multiple files at once, you can select them outside the system and drag and drop the whole group in. Select the document type **Project Document** and make sure to **check the box** that Use this document type for all.... Files.

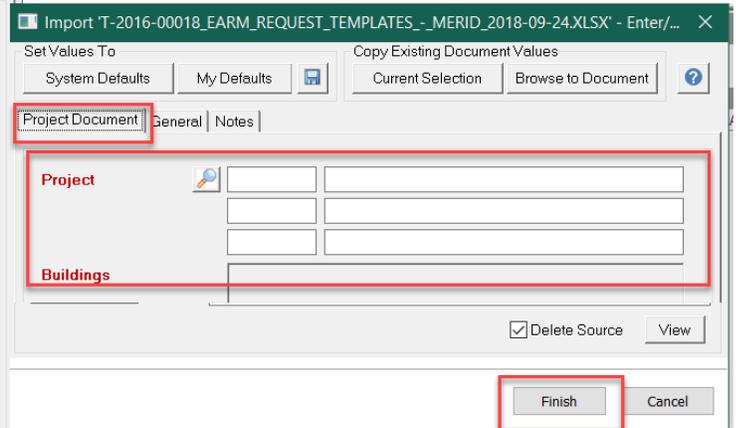

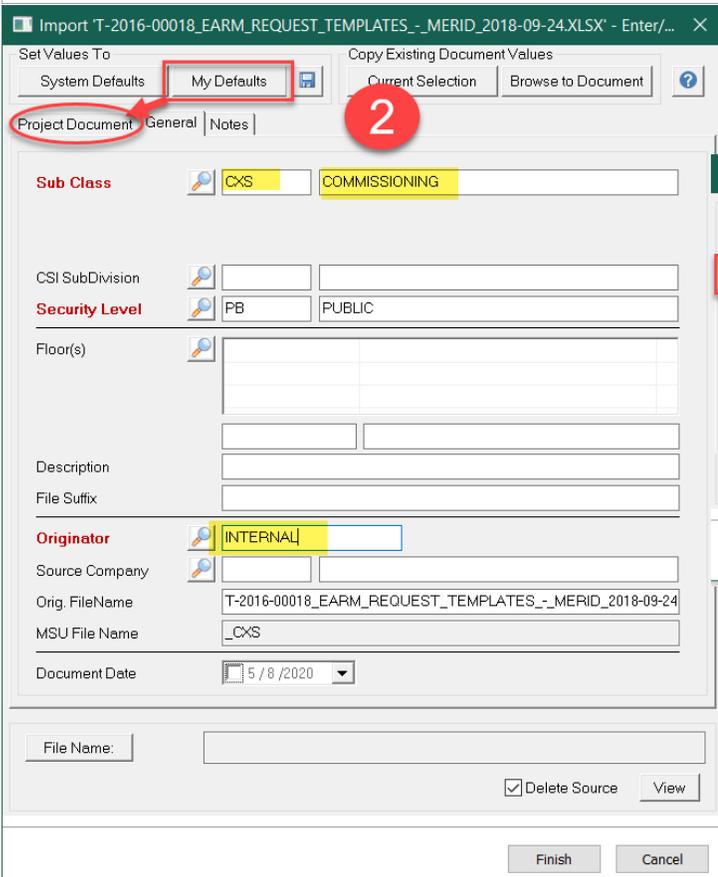

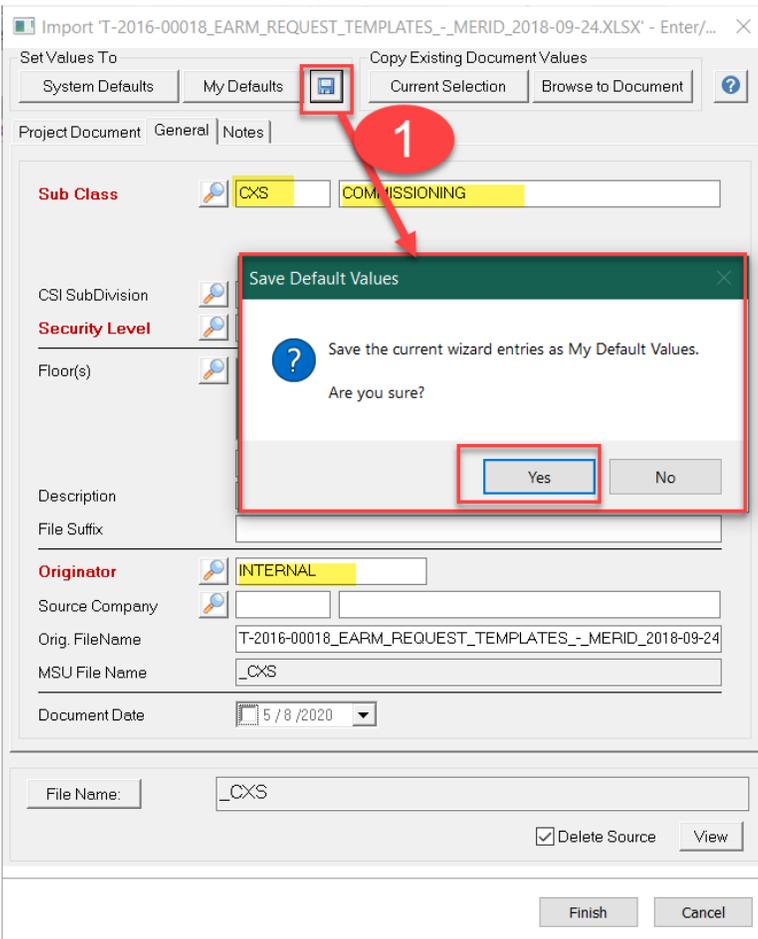

- If you are adding multiple files at once, **pay very close attention to the top of the add wizard** for which file you are adding. They don't usually add in the same order that they are listed in the network drive.

### **One time set-up to save LOTS of time when adding all these files into Meridian:**

- Leave the project field blank, go to the **General** Tab and fill out the **Subclass: Commissioning** and **Originator** fields the way you will always want them, then **click the save button** at the top of the wizard to set these as your default settings.
- Then whenever you add files, click **My Defaults** when the wizard opens, fill out the project and click **Finish**.

## Revision History and Owner of Document
